Scope

The Crane & Rigging micro-credential for Lift Plan Evaluation sets the minimum requirements for a person to demonstrate competence in the evaluation of lifting plans for crane lifting operations within the wind industry.

1. Crane and Rigging Micro-Credential Lift Plan Evaluation
   a. The crane lift plan is necessary to ensure that the lift plan is appropriate for the site, the load, and the rigging.
      i. To prove competency the evaluated person must:
         1. Know how to read and interpret lift plans
         2. Know how to evaluate lift plans with known conditions on the site
         3. Know how to identify deviations between the lift plan and the actual conditions
         4. Know how to verify rigging capacity
         5. Know how to verify crane inspections
         6. Know how to verify lift plan personnel credentials
         7. Know how to assess emergency planning for the lifting issues
         8. Demonstrate practical knowledge on written test with a 100% score on the test
   b. If the evaluation was done in the field did the person being evaluated perform all the review in a safe manner?
      i. The person being evaluated must:
         1. Use all required PPE while the evaluation was being performed.
