61400-1 Subcommittee Scope

**Scope:** Review IEC 61400-1 and adopt as an AWEA US national standard, with a US specific Annex if needed.

**Process:** The committee will be formed of US experts in the wind industry making up all relevant stakeholders to include Original Equipment Manufacturers, Certifying Bodies, Test Labs, and End Users. The committee will review the history of the modifications to edition 3 of the standard to understand the basis for the changes. The committee will then review all comments that were developed by all member countries in the review process. All US comments will be reviewed first to determine if appropriate modifications were made to the latest edition or if specific US modifications to the standard are needed to appropriately address the comments. Next, all non-US comments will be reviewed and any modifications to the latest edition based on these comments will be reviewed to ensure they are appropriate to the US. Any areas requiring modification will be addressed in a US specific Annex to the standard. The final document will be presented to the WSC for review and acceptance. Once found acceptable to the WSC, the document will go thru the formal ANSI process for acceptance as an AWEA US standard.
